Position the stamp so the left hand side of the scale so the valley of the perforation is bisected by the line. Slowly move the stamp upwards until the valleys and lines match up for all perforations. Then read off the perforation index on the right hand side.

Not suitable for unperforated or rat-nibbled stamps.

Do not use whilst driving or operating heavy machinery.

Print the page to a laser printer ensuring that page scaling is set to None. The right hand edge scale is in centimetres so to check the printout use a ruler to check the scale.
